Continuation of 11. does NOT place the application in condition for allowance because: Applicants argue that the prior art "could maybe do what the invention claims, but does not teach doing so". However, as per the apparatus, it is the examiner's position that the prior art teaches the required elements as per the instant claims and as outlined in the previous office action. The prior art teaches a MOCVD apparatus containing at least a means for flexibly switching the inlets, at least two three-way valves, and quick-connect couplings between the inlets and the supplies. Applicant argues that the Yoshioka valves have nothing to do with which compartment of the reactor the gas lines are connected to. It is respectfully submitted that the Shibata reference taught a reaction chamber having various compartments. Yoshioka was utilized to support the limitation of at least two three-way valves. Yoshioka discloses that the three-way ports are utilized to connect auxiliary lines to various transfer lines for purging purposes (i.e. upstream of the chamber). Additionally, it is noted that Yoshiokas' three-way valves are 15a and 15d are located between the gas inlets and supplies (see fig. 2), and therefore, Applicants' arguments as per the Yoshioka reference are not persuasive. As per the Doering reference, Applicants argue "this equipment (of Doering) could be used to connect different compartments of the reactor to different supplies, but there is no suggestion to do so." Doering teaches a means for felxibly switching the inlets/flexibly introducing precursor and purge gases into the apparatus via quick connect couplings (see [0107]-[0108]). Furthermore, regarding applicants' argument that the prior art does not explicitly teach flexibly connecting the various compartments of the reactor to different equipment/supplies, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from the prior art apparatus satisfying the claimed structural limitations.
